

ARTIFICIAL INTELLIGENCE AND EMERGING TECHNOLOGY

BUSINESS TRANSACTIONS DIVISION

Emerging technologies are creating massive changes in the way organizations function and people work. Technology, and most recently Artificial Intelligence, have revolutionized many work environments. With no signs of technological innovations slowing down, there is a need for the private and public sectors to examine more carefully the legal ramifications they may face as they implement these technologies.

Our firm provides strategic legal counsel to help clients adapt to these innovations while ensuring compliance with state, federal, and international laws. We advise on data privacy and security, intellectual property protection, AI compliance, technology transactions, litigation, and government affairs. Whether assisting with regulatory compliance, protecting proprietary technology, drafting technology contracts, or resolving disputes, our team helps businesses and government entities mitigate risks and maximize opportunities in the digital age.

Our firm's experience and relationships in tech, business transactions and local government uniquely position

us to provide legal services across a range of emerging fields, including:

- **AI in Education** – Advising on personalized learning tools and school district resource allocation optimization.
- **Complex AI/Technology Contract Negotiations** – Assisting clients with negotiating and drafting technology-related contracts, including software licensing agreements, in compliance with developing regulations.
- **Smart Cities & IoT** – Advising on data security, privacy concerns, and regulatory frameworks for interconnected technologies.
- **Government Contracts & New Technology Procurement** – Providing government clients with the keys to successful deployment of new technology, from decision-maker buy-in to winning, implementing and upgrading over the course of the contract.
- **AI & Smart Technology** – Ensuring responsible AI development, including engagement with ethical considerations and compliance with evolving regulations.
- **AI & Emerging Technology Compliance** – Assisting clients with implementation and training on AI laws and ensuring clients understand how these regulations affect their work, services, and products implemented for daily use and operations.
- **Cybersecurity & Data Protection** – Helping clients implement robust security measures and comply with data protection laws.
- **Land Use & Development for Technology Infrastructure Projects** – Assisting with zoning, permitting, and regulatory approvals for technology infrastructure projects, including data centers.
- **Energy Solutions for AI/Cryptocurrency** – Leveraging our experience with public/private partnership transactions to develop energy solutions for the AI and cryptocurrency industries.
- **Cryptocurrency & Digital Assets** – Navigating regulatory compliance, financial transactions, and risk management in blockchain and digital finance.
- **Advanced Air Mobility** – Providing legal guidance on licensing, operational compliance, and liability in the growing field of urban air mobility.
- **Litigation and Dispute Resolution** – **Representing clients in litigation related to AI and technology, including patent disputes and data breach cases.**

As innovation accelerates, organizations must be prepared to address legal risks while leveraging new technologies for growth. Our team is committed to helping clients navigate this dynamic landscape with confidence and foresight.

OUR INSIGHT

As AI and emerging technologies rapidly evolve ahead of developing regulations, businesses and public entities must take proactive steps to ensure compliance, mitigate risks, and adapt to emerging legal challenges.
